

PanCare Childhood & Adolescent Cancer Survivor Care & Follow-Up Studies

PanCareSurFup is a five-year project (2011-2016) that carries out studies to:

- ✓ Determine the risks of cardiac disease and subsequent cancers
- ✓ Evaluate the causes of late deaths among long-term survivors of cancer diagnosed during childhood or adolescence
- ✓ Establish guidelines, models of follow-up and transition

PanCareSurFup's studies will help PanCare to implement its goals of ensuring delivery of optimal long-term follow-up care to European children and adolescents surviving cancer.
